

LITHIUM IRON PHOSPHATE BATTERY

SPECIFICATIONS

Model	: IFR21700
Description	: Lithium Iron Phosphate rechargeable battery (RoHS compliant)
Dimension	: Max. 21.5(Ø) x 70.5(H) mm
Nominal Capacity	: 3Ah (Min. 2.85Ah) at 600mA rate discharge to 2.0V at 25°C 3 cycles allowed for incoming inspection Discharge capacity varies with discharge current and temperature
Nominal Voltage	: 3.2Volt (after charge)
Cut-Off Voltage	: 2.0Volt
Approximate Weight	: 76g (bare cell)
Internal Impedance	: <30mΩ (with 1KHz AC testing at full charge)
Cycle Life	: 2,000 standard charge/discharge cycles > 70% (2.1Ah) capacity
Charging	: Using dedicated CC/CV (3.65±0.03V) battery charger only Charging with CC (Constant Current) to 3.65V, then charge with CV (Constant Voltage) till charge current <150mA Standard Charge Current 600mA at 25°C below 8 hours Max. Charge Current 1.5A at 25°C below 3 hours
Discharging	: Standard Discharge Current 600mA at 25°C Max. Discharge Current 9A at 25°C (Conditions apply)
Temperature Range	: Charge 0°C to 45°C Discharge -20°C to 60°C Storage 10°C to 25°C (Recommended) -10°C to 45°C (within 1 month) -10°C to 35°C (within 3 months)
Warranty	: Limited warranty is provide against defects of poor workmanship for 12 months from date of shipment. Problem caused by misuse, mishandling, malfunction of equipment, or mix-use of cell is not under this warranty. Replacement of cell is limited to 1-to-1 only
Storage Characteristic	: Long term storage may cause loss of capacity. Capacity recoverable related to time of storage. Cell is recommended to store with 45% capacity charged, temperature 20±5°C, and relative humidity 45%-75%. After max. 12 months storage, capacity recovery will be > 70% initial capacity (~2.1Ah), after 5 recovery charge/discharge cycles.
Appearance	: No scratch, rust, discoloration, leakage which may adversely affect commercial value of the cell
Standard Test Condition	: Unless otherwise specified, all test are conducted at temperature 20±5°C and relative humidity 60±15% The ammeter and voltmeter with accuracy grade 0.5 or higher The slide caliper with scale 0.01mm The impedance meter with AC 1kHz measurement

Information is for reference only and is not construed as warranties either expressed or implied, of future performance. Performance varies with time, usage and storage condition.. 1 year limited guarantee against manufacturing defects. Other problem caused by misuse, mishandling of cell, or malfunction of equipment, is not under the warranty.

Model : IFR21700
Version : 2.80

LITHIUM IRON PHOSPHATE BATTERY

SPECIFICATIONS

Capacity Retention	: Discharge measured after the cell is stored for 28 days after standard charge. Capacity retention $\geq 85\%$ initial capacity ($\sim 2.55\text{Ah}$)
Maintenance Charging	: Maintenance charging is required for storage over 3 months or when battery open circuit voltage below 3.3V. Prolonged storage without maintenance may result is battery gassing and loss of performance.
Remarks :	: Charging voltage shall be less than 3.65V/cell. It must never exceed 3.68V/cell.
Ex-Factory Condition	: As per air shipment regulations, the battery must be shipped at a State of Charge (SoC) $\leq 30\%$. We recommend customer to arrange supplementary charging of the battery after receiving the batteries.
External Short Circuit Test	: No fire, no explosion for short-circuiting of the positive and negative terminals of a fully charged cell with a total external resistance of $80\text{m}\Omega \pm 20\text{m}\Omega$ at $20 \pm 5^\circ\text{C}$.
Free Fall Test	: No fire, no explosion for dropping a fully charged cell 3 times from a height of 1m at random orientations onto a concrete floor at $20 \pm 5^\circ\text{C}$.
Thermal Abuse Test	: No fire, no explosion for placing a fully charged cell in an oven with temperature raised at a rate of $5^\circ\text{C}/\text{min} \pm 2^\circ\text{C}/\text{min}$ to a temperature of $130^\circ\text{C} \pm 2^\circ\text{C}$.
Crush Test	: No fire, no explosion for crushing a fully charged cell between two flat surfaces with a force of $13\text{kN} \pm 1\text{kN}$ at $20 \pm 5^\circ\text{C}$ until maximum force has been applied, or an abrupt voltage drop of 1/3 of the original voltage has been obtained, or 10% of deformation has occurred.
Over-charging Test	: No fire, no explosion for charging a fully discharged cell at a constant current of 6A with a voltage limit of 4.8V for 8 hours.
Forced Discharge Test	: No fire, no explosion for reverse charging a fully discharged cell at a constant current of 3A for 90 min. at $20 \pm 5^\circ\text{C}$.

Information is for reference only and is not construed as warranties either expressed or implied, of future performance. Performance varies with time, usage and storage condition.. 1 year limited guarantee against manufacturing defects. Other problem caused by misuse, mishandling of cell, or malfunction of equipment, is not under the warranty.

LITHIUM IRON PHOSPHATE BATTERY

SPECIFICATIONS

Customer of lithium iron phosphate battery should employ appropriate cautions in order to obtain optimum performance and safety.

Charging	<ul style="list-style-type: none">: Charging current should less than the maximum charging current specified in the specificationCharging voltage must up to the voltage specified in the specificationDo not charge battery over the specified time in the specificationCharging temperature should be within the specified range in the specificationReverse charging should be strictly prohibitedImproper charging may generate heat, smoke, rupture or flame, and cause damage to the battery
Discharging	<ul style="list-style-type: none">: Discharging current should be less than the maximum discharging current specified in the specificationDischarging temperature should be within the specified range in the specificationDo not over discharge the battery below 2.5V/cellOver discharge may occur by self-discharge if the battery is left for a very long time without any useImproper discharge may cause loss of performance
Storage	<ul style="list-style-type: none">: Storage temperature should be within the specified range in the specificationStorage is recommended in low humidity, nop corrosive gas atmosphereLong term storage may cause loss of capacity
Cycle Life	<ul style="list-style-type: none">: Cycle life differs by conditions of charging, discharging, operating temperature and/or storage conditionLevel of capacity differs by cycles of battery used
Product Design	<ul style="list-style-type: none">: Do not solder directly on bare cellBattery should be positioned far from heat source and heat componentsAppropriate shock absorber should be equipped to minimize shock on the batteryProtection circuit against overcharge, over discharge, over current should be equipped to insure safety in case of misuseBattery should be designed to connect only to specified charger and systemReverse connection of battery should be avoided in system designImproper product and system design may cause loss of battery performance
Product Assembly	<ul style="list-style-type: none">: Battery cell should be inspected visually before product assembly to avoid usage of damaged cell (for example, sleeve damage, battery distortion, or leaking)Excessive force on the battery terminals and battery surface should be avoidedPrecaution should be taken when battery is moved / transported to other placeDo not disassembly, short-cutcuit, incinerate, immersion in water, and mix use of batteryBattery should be disposed in discharged stateImproper handling may cause loss of battery performance
Warning	<ul style="list-style-type: none">: The battery may present risk of fire and chemical burn if mistreated. Keep away battery from children.

Information is for reference only and is not construed as warranties either expressed or implied, of future performance. Performance varies with time, usage and storage condition.. 1 year limited guarantee against manufacturing defects. Other problem caused by misuse, mishandling of cell, or malfunction of equipment, is not under the warranty.
